Classified without compromise
from the inside out

HOW DO YOU
KEEP YOUR
INSIDE INFORMATION
from leaking out?

THE COMPANY DEPENDS ON YOUR COMMUNICATIONS FOR THE LATEST INSIDE DEVELOPMENTS, STATISTICS, STRATEGIES, AND TACTICS.

INTRODUCING
PORTAUTHORITY

THE ONLY SOFTWARE
DESIGNED SPECIFICALLY TO
CLASSIFY COMMUNICATIONS
FOR THE WORLD'S
BUSINESS LEADERS

Your internal documents contain vital information that – if leaked outside – could cost you the competitive edge you strive for, erode your shareholders' value, and expose you or the company to unwanted and preventable litigation.

Is this possible? Even with the sophisticated technologies you already employ?

Do you really know where or to whom your emails are being forwarded in confidence?

The truth is that over seventy percent of your company's market value resides in its intellectual property. Statistics show that the majority of incidents that lead to information leakage are sourced from the inside, yet ninety percent of security spending is focused on intrusion versus internal leakage.

Until now, even the best protection was geared to the general needs of the company and not specifically to the information creator and its most important custodians: YOU and other important decision makers in the company.

YOUR INFORMATION IS NOW **CLASSIFIED AND FORWARDPROOF.**

**PORTAUTHORITY
TAKES ADVANTAGE OF THE
SAME TECHNOLOGIES
USED IN PROTECTING
COMMUNIQUES OF HEADS
OF STATE**

This revolutionary product was created by former security experts for the US and Israeli military and counter-intelligence agencies.

It is by far, the most trusted science for classifying and identifying the differences between digital information: What is nominal or critical. Private or public. To be sent out or to be held in confidence.

**YOUR INFORMATION IS NOW
CLASSIFIED AND FORWARDPROOF.**

You establish best practices in your company and it's no different with PortAuthority. You decide who gets to forward your sensitive information. PortAuthority is there to maintain the classification of your sensitive email, confidential agreements, product information, customer data, and other vital documents.

PortAuthority classifies words, sentences, paragraphs, and entire documents. It's now

your decision. PortAuthority acts as a personal bodyguard for your sensitive/vital information, but in reality, it's actually protecting the whole company. That's because once you set the conditions for the communications, no one can mistakenly or intentionally forward them to unauthorized recipients.

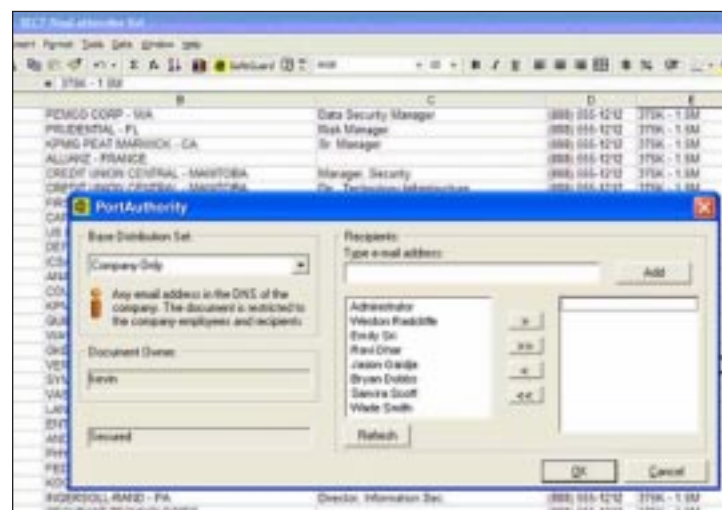

**HOW IT WORKS.
FORENSIC FEATURE RECOGNITION.**

Vidius' PortAuthority analyzes the forensic characteristics of the content when classifying your information. In this regard, it's the

closest thing to facial recognition for written text. By applying automated, advanced algorithms, PortAuthority allows the individual author – YOU – to accurately and immediately block intellectual property from unauthorized forwarding from all exit ports of your corporate network.

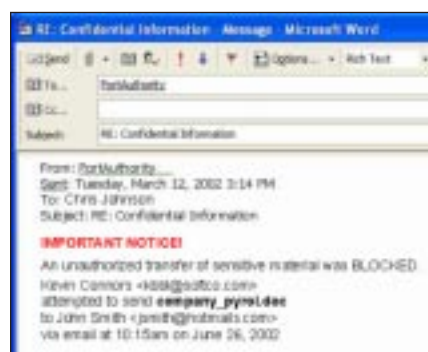

PortAuthority, unlike locks & encryption, does not alter your files or restrict your workflow as it plugs into Microsoft Office for everyday use.

PORTAUTHORITY PUTS THE POWER WHERE IT BELONGS. IN YOUR HANDS.

←..... You quickly determine the parameters for each document you choose to classify.

..... Then, should an attempt be made to go against your instructions, PortAuthority immediately identifies the source and reports directly to you or designated staff.

PORTAUTHORITY PUTS THE POWER WHERE IT BELONGS. IN YOUR HANDS.

PortAuthority accomplishes this according to specific parameters you set, simply and easily, for each document or email you choose to classify. Once established PortAuthority takes charge. Should an attempt be made to go against your instructions, either intentionally or unintentionally, PortAuthority immediately identifies the source and discreetly sends reports directly to you or designated staff.

PORTAUTHORITY. THE PRODUCT OF THINKING FROM THE INSIDE OUT.

PortAuthority, like other Vidius products, is the result of looking at technology in ways that other companies aren't. Vidius recognizes the importance of safeguarding the information of top decision makers and designed a system that could be adapted for your specific needs.

Statistics clearly show that insider threat remains the greatest single source of proprietary information loss to organizations. Vidius' contrary thinking to safeguarding digital assets has made PortAuthority so

effective and reliable that it enables you to communicate freely with your company and partners without having to concern yourself with any forwarding issues. PortAuthority has turned security into a competitive advantage and makes it a crucial tool of top management.

All information is not created equal. Call **818 761-9708** or visit **www.vidius.com** and start controlling who sees your information.
